

# Honduras energy island programme

Why should Honduras invest in energy resources?

The population of Honduras suffering from poverty will be directly benefited by the resources generated by promoting the best use of the country's energy resources and the proper positioning of government resources. Additionally, this would reduce conflicts in the installation of generation and T&D plants, which results in lower electricity costs.

How will energy deficiency affect the population of Honduras?

The Honduran population will have a better availability of reliable data on energy deficiency. The population of Honduras suffering from poverty will be directly benefited by the resources generated by promoting the best use of the country's energy resources and the proper positioning of government resources.

Is Honduras affordable?

According to this statistic, Honduras has an affordability rate of 94%. However, when comparing this indicator with the other countries of the Central American region, Honduras is the next to last country with affordability ratings, being above only to Nicaragua (82%); the other countries, has an affordability value equal to 100%.

The Honduras Scaling-Up Renewable Energy Program in Low-Income Countries (SREP) is giving US\$30 million in grants and near-zero interest for a diverse programme of investment plans (rural electrification, cookstoves, regulatory reform initiatives)

Activities include upgrading the transmission infrastructure for grid-connected renewable energy, introducing wind and solar power in isolated, off-grid locations, and promoting the uptake of low-carbon cookstoves. The ...

Regulations that aim to attract increased investments in the deployment of variable renewable energy can improve energy access and meet the electricity needs. The report finds that Honduras has high-quality solar ...

Roatán, Honduras 21 October 2015. Today marks the launch of the "Development of Renewable Energy in Bay Islands (ERIBA)" project at an official event on the main island of Roatán.

Regulations that aim to attract increased investments in the deployment of variable renewable energy can improve energy access and meet the electricity needs. The report finds that Honduras has high-quality solar potential for electricity production.

The population of Honduras suffering from poverty will be directly benefited by the resources generated by promoting the best use of the country's energy resources and the proper positioning of...

The objective is to determine the renewable energy potential in the Honduras Bay Islands and evaluate the

# Honduras energy island programme

feasibility of using wind and solar energy sources. The assessment will be used to prepare a strategy in order to reduce progressively the use of fossil fuel in the islands.

Honduras has been a leading country in the promotion of variable renewable energies, having a great capacity to expand these technologies, a situation that would allow promoting schemes and ...

Activities include upgrading the transmission infrastructure for grid-connected renewable energy, introducing wind and solar power in isolated, off-grid locations, and promoting the uptake of low-carbon cookstoves. The plan also includes support for policy and regulatory reforms to improve renewable energy market conditions. Honduras" FIP and ...
