

How much solar radiation can a roof receive in Hong Kong?

In Hong Kong, the total area of building roofs amounts to 26.08 km², which receives an average annual solar radiation reception of 1.54 × 10⁶ Wh/m², resulting in a physical potential of 4.00 × 10¹³ Wh for roofs. This constitutes 13.9% of the total physical potential of building PV (see Fig. 5).

What is the PV potential of building roofs & facades in Hong Kong?

Using this method, we evaluated the PV potential of building roofs and facades in Hong Kong and obtained the following results: Hong Kong's roof area, totaling 26.08 km², shows a physical potential of approximately 4.00 × 10¹³ Wh, reflecting the significant solar energy collection capacity.

Which roof area is not suitable for PV installation in Hong Kong?

According to a local study⁴, around one-third of the roof areas in Hong Kong is not worthy of installing PV systems. Those rooftop areas are of low solar irradiance, at perimeter zone of the building roof or pitched roof with slopes over 40°¹⁷⁶. Therefore, the roof area suitable for PV installation is estimated at around 25.7 km².

How many rooftops are suitable for PV panels in Hong Kong?

Using high-resolution airborne laser scanning data and geographical information systems data to map the available rooftop area in Hong Kong, researchers also found that out of the 309,000 buildings, 233,000 are suitable for installing PV panels with a total area of 39 km².

Why do Hong Kong roofs have a higher solar potential?

The solar potential of roofs is substantially higher in the summer and autumn, decreasing notably in spring and winter. This fluctuation is largely due to Hong Kong's low latitude, which results in higher solar altitude angles during the summer and autumn. Consequently, solar radiation strikes the roofs more directly in these seasons.

Can PV technology be implemented on building surfaces in Hong Kong?

Given the high building floor area ratio in Hong Kong, the city holds significant prospects for implementing PV technology on building surfaces. The technical potential, combining roof and facade feasible installations, is approximately 5.68 × 10¹² - 7.31 × 10¹² Wh.

The third Technical Working Group meeting of the HKIA Airport-wide Carbon Reduction Programme was held on 28 August to facilitate an exchange of views and insights on solar power and promote the wider adoption of this technology at Hong Kong International Airport (HKIA). The theme was discussed in response to the Government's introduction of a Feed-in ...

This study investigates high-rise, high-density commercial districts in Hong Kong (HK), using Random Forest algorithm combined with the SHapley Additive exPlanations method to assess ...

3. Methodology. This study proposes a fast and accurate method based on the machine learning model for the estimation of annual rooftop solar irradiation over an urban area, with a flowchart presented in Fig. 4. Firstly, the Morphological Tessellation (MT) method [27] is used to calculate morphological features. Secondly, as a preliminary analysis to investigate ...

Installation of Renewable Energy Systems. Apart from promoting the development of renewable energy (RE) by taking forward a number of large-scale Government RE facilities, the Government has also introduced the Feed-in Tariff (FiT) Scheme to help encourage the private sector to participate in small-scale distributed RE generation by installing RE systems at their own ...

Complete guide to 23 amazing rooftop bars in Hong Kong - 2024. Up-to-date listing made by experts, packed with all info you need about each rooftop bar Hong Kong - pictures, opening hours, dress code, booking links and much more. One of the most popular cities in the world. The perfect weekend get-away with great restaurants, nightlife and events.

Holdings Limited and Widex Solar Asset Holding Ltd are both controlled by PAG, a leading APAC-focused alternative investment manager. The facility is structured as a non-recourse project ...

Using renewable energy is one of the approaches to mitigate the greenhouse effect. Solar photovoltaic (PV) technology is a widely adaptable application and converts the solar energy into electricity with promising efficiencies [5]. The major types of renewable energy that are currently available in Hong Kong includes: solar energy, wind energy, bio-gas, and bio-diesel fuel.

WWF-Hong Kong believes the Hong Kong Government can set and realise a more ambitious target for 10% renewable energy by 2030. A report on the solar photovoltaic (PV) potential of building rooftops in Hong Kong released by The Electrical and Mechanical Services Department (EMSD) on Friday underestimates what can be achieved across our city with ...

HONG KONG, Dec. 20, 2021 /PRNewswire/ -- Hong Kong Aircraft Engineering Company Limited (HAECO Group) and EcoSmart Energy announced the official launch of the largest solar project in Hong Kong, pursuant to which EcoSmart ...

In May, AEMO published its final report on the SA separation, "Trip of South East - Tailem Bend 275 kV lines on 12 November 2022", which highlighted that for the 517 MW of rooftop solar capacity installed after the cut ...

The so-called solar switch-off or remote solar shut-down mechanism is a "last resort" measure devised by AEMO and electricity networks to ensure rooftop solar systems can be curtailed or ...

The annual solar irradiation in Hong Kong is about 1400 kWh/m², which is much better than that in Germany

2(1000 kWh/m²). As shown in Figure 1, power generation from photovoltaics (PV) amounts to cover approximately 7.2 percent of Germany's net electricity consumption in 2017 [3]. This result reveals the great potential of adopting

The expansion of distributed energy resources (DER) such as rooftop PV and battery storage was also included in the Australia Energy Market Operator's (AEMO) recent Integrated System Plan, which ...

Hong Kong's abundant solar energy and rooftop capacity are ideal for solar photovoltaic energy generation, a PolyU study has found. Solar panels with different energy conversion efficiency can be integrated into buildings without ...

Rooftop solar led renewable generation in Australia in the third quarter of 2024, accounting for 38.5% of the total, compared to grid-scale solar at 18.3% and wind at 13.4%. ... (AEMO). Rooftop ...

AEMO has granted BrightNight approval to connect its Mortlake Energy Hub, which includes solar and storage facilities, to the Victoria grid. ... Solar rooftop tenders: Germany awards 259MW, France ...
