

Hongri solar panel installation process

How long does it take to install solar panels?

Select solar panels and inverters. Your installer will order the equipment and schedule the installation. Professional technicians install the solar panels, typically taking one to three days. Local authorities inspect the system, and once approved, your solar panels are connected to the grid.

How do I install solar panels?

Securely mount solar panels on your chosen location using mounting racks. The type of rack will depend on whether the installation is on a roof or the ground. Ensure high-quality wiring and connectors to minimize energy loss. Your installer will design a wiring system that connects the panels to the inverter and then to your electrical panel.

How do I install a solar PV system?

The first step in installing a solar PV system is meeting with a qualified solar installer. During this initial consultation, the solar company will: - Assess your energy needs : By reviewing your electricity bills and understanding your consumption patterns, the installer can recommend the right size and capacity of the solar system.

How does a solar installer install a roof?

Any open holes in your roof shingles will be sealed to prevent leaking. The installer will then install the solar panels to the racking and connect the electrical wiring. They'll also install any additional equipment, such as an inverter or battery bank. Many solar installers can complete installation in just one day.

Do you need a website evaluation before installing solar panels?

Before installing solar panels, conducting a radical website evaluation is critical to ensure sure most excellent overall performance and safety. One of the first steps is a roof inspection. Assessing the structural integrity of the roof is essential because it desires to guide the weight of the solar panels and mounting device.

How do Trethewey & Warda install solar panels?

With the mounting system and electrical components in place, Trethewey and Warda install the solar panels. Each panel is bulky and heavy, so lifting them onto the roof is often a two-person job. Once each panel is in place, Trethewey and Warda connect it to the microinverter and fasten everything to the rails with clips and clamps.
