

How big a fish tank can be placed in a locker

Do fish tanks need floor support?

Floor support depends on several factors, including the floor layout and aquarium size. You don't need to worry about floor safety unless you have a monster-sized fish tank holding 150 gallons. You can easily place fish tanks with less than 60 gallons of water anywhere in your home.

How much water can a fish tank hold?

You don't need to worry about floor safety unless you have a monster-sized fish tank holding 150 gallons. You can easily place fish tanks with less than 60 gallons of water anywhere in your home. If you have a strong structural foundation and no framing defects, you can also place up to a 125-gallon tank with no problems!

Can you put a 55 gallon fish tank on a second floor?

You can easily put a 55-gallon fish tank on a second floor. In fact, any tank up to and including a 60-gallon capacity should be fine in almost any room and on almost every level of your home. If you're concerned at all about your upstairs floor's strength or integrity, place the aquarium across the beams rather than between them.

How big should a fish tank be?

Beginners are recommended to go for medium-sized aquariums of between 20 - 40 gallons, with a rectangular shape and standard dimensions to keep things simple. The extra water will make it much easier for you to manage good biological filtration and avoid ammonia spikes, shifts in temperature, and other shocking events for your fish.

Can you put a fish tank on a second floor?

Yes, you can put a fish tank on a second floor. A tank as large as 125 gallons can even be placed upstairs, provided you have the proper stand to support the weight as well as a structurally-sound floor with no framing defects. I wouldn't recommend putting a tank larger than 125 gallons on an upper level without reinforcing the floor first.

Can a fish tank fall through a floor?

Heavier aquariums can cause severe structural damage as the pressure causes the water to fall out and ruin the floor. You can make sure your fish tank doesn't fall through the floor by calculating the aquarium load capacity. Read on to find out more about the recommended floor load limit and aquarium sizes.
