How far can a solar panel protrude?

The solar photovoltaic (pv) or better known as a solar panel must not protrude more than 20cm or 0.2m beyond the plane of the wall or roof slope. On flat roofs these can protrude by 60cm or 0.6m. This would apply to solar panel roof tiles as well as the larger solar panels.

Can solar panels be installed on a wall?

Class A allows for solar panels to be erected on residential properties subject to a few conditions. The most important factor is that you must keep the solar photovoltaic (pv) or better known as a solar panels or indeed solar roof tiles within 20cm of the wall or slope of the roof. Yes, you can install them on a wall if you want.

How far does a solar PV system protrude from a wall?

(a) the solar PV or solar thermal equipment would protrude more than 0.2 metres beyond the plane of the wall or in the case of a pitched roof, the roof slope when measured from the perpendicular with the external surface of the wall or pitched roof slope;
