What is the optimal tilt angle of photovoltaic solar panels?

The optimal tilt angle of photovoltaic solar panels is that the surface of the solar panel faces the Sun perpendicularly. However, the angle of incidence of solar radiation varies during the day and during different times of the year.

How does the orientation of a solar panel affect output power?

Introduction The orientation of a solar panel directly impacts the output power of a photovoltaic (PV) system. To increase the energy production per unit area, it is crucial to optimize the orientation of the solar array. Ideally, the solar panels are installed on 2-axis or 1-axis motorized trackers.

How to choose a solar installation angle?

If connected to a stand-alone power system, the installation angle of solar panels should be based on the light conditions to obtain the maximum power output. Generally, if the output of the solar panels can be met even on the lowest light intensity of the year, then the solar output at the chosen angle will meet the year-round demand.

What affects the performance of PV panels?

The performance of PV panels is highly affected by its orientation and tilting angle. The tilt angle and orientation can change the amount of solar radiation captured by the panel. Geographical locations. The radiation level reaching the panels depends on the latitude and longitude of the location where PV panels are located.

Why does the tilt angle of PV panels change?

The optimum tilt angle at the same location changes periodically (Fig. 7) due to the Earth's revolution around the sun. In summer, when the sun shines more directly on the northern hemisphere, the tilt angle is generally small; winter is the opposite. Adjusting the tilt angle of PV panels according to the season helps capturing more energy.

Should solar panels be tilted to maximize power generation?

To maximize power generation, the tilt angle should be adjusted to ensure that PV panels are exposed to direct sunlight. Although a sun-tracking system can track sunrays in real time to approach the best tilt angle, the investment is too expensive (or not economical) for both residential users and large solar farms [6,7].
