

How to build a springboard for flexible photovoltaic panels

What is a flexible solar panel setup?

A flexible solar panel setup is usually best for on-the-go solar power instead of as a permanent home solar solution. When you're out on the trail, camping, or driving long distances, having a durable, lightweight, and flexible solar panel setup can be a great way to generate free, clean electricity from the sun.

What are the best applications for flexible solar panels?

The best application for flexible solar panels is when you need a portable solar solution. Products like the Winnewsun Flexible Solar Panel are one way to generate solar power on the go, like on the roof of an RV. Foldable solar panels, like the SUAOKI Solar Charger, can also be a good choice.

Can you use flexible solar panels on irregular surfaces?

For irregular surfaces, you can augment your rigid solar panel array with flexible solar panels. Flexible solar panels don't produce enough rated power to be the sole choice for a residential PV array. But they can help you maximize your electricity generation potential.

How do flexible solar panels work?

Flexible solar panels work similarly to traditional rigid panels, more so than portable and thin-film panels. Like rigid panels, flexible solar encasements use either monocrystalline or polycrystalline silicon cells to absorb the sun's energy and generate electricity.

Are flexible solar panels better than rigid solar panels?

Traditional rigid solar panels have their place, but in some scenarios, flexible solar panels are distinctly advantageous. Imagine you're decking out your RV or remodeling your boat - you'd prefer the smooth contour of flexible solar panels over the boxy rigidity of traditional panels.

How do you wire a flexible solar panel?

Press the panel down firmly, ensuring a solid bond between the panel and the surface. The good news is that flexible solar panels use the same wiring methods as any other solar panel. Choose between a series or parallel connection based on your individual power needs. Once connected, route your cables to the solar controller.
