Yes, vertical solar panel installation is not only possible, to some extent, it might serve as a feasible option too. Uncertain on which direction your solar panels should be installed? Here's is some help.

Should solar panels be vertical or tilted during winter?

As a rule of thumb, solar panels should be more vertical during winter to gain most of the low winter sun, and more tilted during summer to maximize the output. Here are two simple methods for calculating approximate solar panel angle according to your latitude.

Are vertical solar panels a good option?

Vertical solar panels can be a better choice in certain situations. For instance, if you live in a climate with heavy snowfall, the snow will slide down the panel when it is installed vertically. Similarly, if your house is surrounded by trees that shed leaves or acorns, vertical solar panels might be preferred to prevent debris accumulation.

Do solar panels have a vertical tilt?

The vertical tilt, or angle, at which the solar panels are installed in a photovoltaic (PV) system will have an impact on the amount of electricity they can generate. A panel will collect solar radiation most efficiently when the sun's rays are perpendicular to the panel's surface - however the angle of the sun varies throughout the year.

Do vertical solar panels need maintenance?

**Tough Maintenance/Repair-** In event of post-installation breakdown or malfunctioning, hands-on troubleshooting could turn into a big issue with vertical solar panels. To solve the issue, panel or technicians would have to either build scaffolding or drop down from the top.

When should a solar panel be tilted?

A solar panel system at a 40-degree latitude could actually see a notable energy boost of about 4%. For the best dates to adjust your solar panel tilt, mark your calendars for September 15 to adjust the winter angle and March 15 for the spring and summer angles. Which Is More Important: Solar Panel Orientation or Angle?
