Could geothermal power power a small island?

While most small islands will have to rely on intermittent solar or wind power, others are blessed with significant geothermal or hydroelectric potential that could provide a baseload electricity supply, and could conceivably follow the paths of Iceland and New Zealand.

Can Tokelau support itself with solar energy?

Tokelau, an island nation in the South Pacific, is now completely able to support itself with solar energy. Elly Earls met Joseph Mayhew of the New Zealand Aid Programme to find out how this tiny collection of atolls has become almost 100% self-sufficient in less than 12 months.

Could islands cut ties with the fossil fuel industry?

Many islands have access to abundant wind, solar, hydro, tidal, biofuel, or geothermal energy resources and could significantly cut ties with the fossil fuel industry.

Why do small Pacific Islands rely on diesel generators?

Listen to this story. Enjoy more audio and podcasts on iOS or Android. Small Pacific islands generally rely on diesel generators. Connecting them to grids is too expensive. Solar power takes up too much space. And wind turbines are not designed to withstand the hurricanes that sometimes blow through.

Do small islands need a lot of space?

Shah of the University of Delaware points out that while a lack of space is often cited as a constraint for installing renewables on small islands, the efficiency of both solar and wind energy has improved markedly over the last decade, meaning less space is needed. Meanwhile, islands are exploring technologies to harness energy at sea.
