Where is reflect Orbital located?

Reflect Orbital is located in Santa Monica, California, United States. Who invested in Reflect Orbital? Reflect Orbital has 10 investors including Keenan Wyrobek and Baiju Bhatt. How much funding has Reflect Orbital raised to date? Reflect Orbital has raised When was the last funding round for Reflect Orbital?

Who is reflect Orbital?

After graduating, he worked as Director of Engineering at Tri-D Dynamics and Mechanical Engineer at Zipline. Reflect Orbital started as a typical 4am spreadsheet binge, and as the problem was refined and the opportunity became overwhelming Ben quit his job and partnered with Tristan to create an enormous company.

Does reflect Orbital sell sunlight from space?

Reflect sells sunlight from space. Reflect Orbital received investment from Sequoia, marking Sequoia's first space investment since SpaceX. Where is Reflect Orbital's headquarters? Reflect Orbital is located in Santa Monica, California, United States. Who invested in Reflect Orbital?

When did reflect Orbital close?

Reflect Orbital closed its last funding round on Sep 23, 2024 from a Seed round. Who are Reflect Orbital's competitors? Alternatives and possible competitors to Reflect Orbital may include Electra, Doral Renewables, and Ambri. Reflect sells sunlight from space.

In a world where Stanford startups increasingly churn out iterations of food delivery apps and poorly disguised duplicates of ChatGPT, original thinking and boundless ambition are rare traits. However, these traits are at the core of Reflect Orbital, an energy startup with a mission so audacious it borders on science

The European Space Agency (ESA) has long explored space-based solar power as a potential energy solution, theorizing that solar collection in space--where sunlight is over 10 times more intense than on Earth's surface--could eventually meet one-third of ...

Reflect Orbital, a California-based startup has introduced a novel concept aimed at enhancing solar power generation. The company plans to launch 57 satellites equipped with large, reflective Mylar mirrors into space, to extend solar energy production beyond traditional daylight hours. This innovative approach has the potential to address one of the key challenges ...

Solar energy has become a crucial part of the renewable energy landscape, providing clean power to homes and businesses around the world. However, one of the limitations of solar energy is that it is dependent on sunlight, which means that solar panels can only generate power during daylight hours.

And we feel that humanity is just beginning to understand the potential of commercial space. Space still feels new, but humanity has had this feeling before, first journeying into new land tens of thousands of years ago, then exploring the oceans, then the skies.

On a large enough scale, orbital solar isn't a bad idea. Not sure if solar reflectors are the best way to go about it. The alternative I've heard mentioned is microwave emitters and receivers, as those wavelengths travel well through Earth's atmosphere, even clouds.
