

Ic2 Solar power array

What is compact solar arrays IC 2?

CompactSolars, or Compact Solar Arrays, is an IndustrialCraft 2 add-on created by cpw. The mod expands upon the implementation of solar panels in IC 2 by adding 3 new solar panel arrays, which function like multiple solar panels combined in one block. These arrays are both more compact and create less lag, which is useful on larger servers.

What is a solar panel from IndustrialCraft 2?

This page is about the Solar Panel from IndustrialCraft 2. For other uses, see Solar Panel. The Solar Panel from IndustrialCraft 2 is an upgraded version of the Generator that produces EU from the sun. The Solar Panel will only create EU during a clear day, and if there are no opaque blocks above it. It will create 1EU/t.

What is a high voltage solar array?

A High Voltage Solar Array, the highest tier of solar array in the mod. CompactSolars, or Compact Solar Arrays, is an IndustrialCraft 2 add-on created by cpw. The mod expands upon the implementation of solar panels in IC 2 by adding 3 new solar panel arrays, which function like multiple solar panels combined in one block.

How do I use IC2?

It can be used to charge any tier of energy storage unit by either connecting the two blocks by placing them directly next to each other, or using one of IC2's different cable types. There is a slot in the GUI that is for charging tools, batteries, and battery packs.

What is a low voltage solar array?

The Low Voltage Solar Array is a block added by CompactSolars that is an upgrade from the regular Solar Panel.

Is this a clean rewrite of a compact solar array?

This is a clean rewrite of the Compact Solar Arrays from Advanced Machines, using pure IC2 API. It's also a darn sight more CPU efficient. A little spotlight by Techninja117. I love the pyramid at the end, showing how much you get in an HV array. Thanks! (Thanks SilentSpy for the recipe images!)

The low voltage solar array will output 8 EU per tick, which is the sum output of its component solar panels. This ratio remains true with the higher tier solar arrays as well: a medium voltage array outputs 64 EU per tick, and a high voltage array ...

If you want more output power, you can change it in config file. I use this add-on in my own IC2 + BC server. 95% users support this recipe. In my world I created about 800 advanced solar panels (no cheats) and 8 massfab. ...

Ic2 Solar power array

The Medium Voltage Solar Array is the second tier of solar array added by the Compact Solars mod. It is made using 8 Low Voltage Solar Arrays, each of which are made using 8 Solar Panels. Thus, the Medium Voltage Solar Array ...

So, I recently got, like yesterday, IC2 for tekkit since IC2's solar arrays sounded more efficient than the solar panel that comes with tekkit. So I downloaded it, and the only solar array that shows up is the basic solar panel ...

I've seen many solar array blueprints which don't state their sustained power output or give rounded figures, so I've decided to create a tool to calculate the power output of a solar array ...

Low Voltage (LV) Solar Array is an IC Machine used to generate EU from the sun. It is the equivalent of 8 Solar Panels. One LV Solar Array produces 8 EU/t, which is 160 EU per second, or 104,400 EU per day. It is a low voltage device. LV ...

The High Voltage Solar Array is an Industrial Craft 2 generator. It is a more efficient version of the Medium Voltage Solar Array, producing 512 EU/t instead of 64 EU/t in the same amount of ...

The Low Voltage Solar Array is a block added by CompactSolars that is an upgrade from the regular Solar Panel. It generates power at a rate equivalent to the Advanced Solar Panel provided that the sky is visible, although it does not ...

Solar Panels are a common type of EU Generator used in IndustrialCraft 2. They require little effort to set up correctly, and each one consistently provides 1 EU/t on clear, sunny days, and as long as the more expensive GregTech 4 recipe ...
