

How can aplsi improve the power system in Indonesia?

"APLSI wishes to optimize the role of the private sector as a government partner in building a reliable electricity system based on just energy transition by diversifying investment in power plants from various renewable energy sources whose potential is huge in Indonesia," Arthur explained.

Who installed solar power plant in Indonesia?

The completion ceremony was held on April 19, attended by Vice Minister of Embassy of Japan in Indonesia Mr. Masami Tamura, Deputy Ambassador of Embassy of Switzerland Mr. Philippe Strub, and other honored guests. This solar power plant was installed by Alam Energy on land adjacent to PT.

Will Indonesia's energy transition be a good idea?

Evidence suggests that Indonesia's energy transition should be well under way. The government has set a target to support renewable energy development in the New Energy and Renewable Energy Bill through increasing on-grid renewable capacity, converting diesel power generation to solar and expanding rooftop solar.

Will Indonesia see a boom in renewables?

Indonesia has not yet seen a boom in renewables, resulting in fossil fuels meeting its electricity demand growth. The National Energy Policy (NEP) 2014 set a target of 23% of renewables in the energy mix by 2025, however, this target is likely to be reduced to between 17-19% in the revised NEP currently being developed.

Does Indonesia need international funding to retire coal-fired power plants?

Based on IESR's "Financing Indonesia's Coal Phase-out" study with the Center for Global Sustainability, University of Maryland, to retire 9.2 GW of coal-fired power plants by 2030, Indonesia needs international funding support to meet the cost of retiring the power plants, around USD 4.6 billion by 2030.

Does Indonesia have a power sector boom?

Coal use in the electricity sector in the past ten years has nearly doubled, contributing to a sharp rise in overall power sector emissions, totalling 86 million tonnes of CO<sub>2</sub> (MtCO<sub>2</sub>) from 2013 to 2023, mainly from coal. Indonesia has not yet seen a boom in renewables, resulting in fossil fuels meeting its electricity demand growth.
