

What is innolith I-state battery technology?

Innolith, a European developer of Li-ion battery cell technologies, announces the commercialisation of its I-State battery technology platform for use in electric vehicles (EVs) and e-mobility applications.

What is innolith battery cell technology?

The Innolith battery cell technology is based on the proprietary liquid inorganic electrolyte that can operate at up to 5 volts without degradation, unlike the Li-ion batteries in use today that are limited to 4.2 volts. This gives the batteries higher gravimetric energy density of 300 Wh/kg and volumetric energy density of 825 Wh/L.

What is innolith e-mobility battery technology?

Innolith runs one of the world's leading battery cell research programs at its R&D Center in Bruchsal, Germany, where it is pioneering a next generation e-mobility battery technology based on a proprietary electrolyte that delivers cells with lower cost, high energy density along with higher safety and temperature performance.

Is innolith a sustainable battery?

The I-State battery uses 20% fewer rare-earth metals per kilowatt-hour than traditional lithium-ion batteries. The battery is also made with 100% locally produced electrolyte, and the electrolyte is recyclable, collectively making the battery more sustainable. Innolith is headquartered in Basel, Switzerland. It was started over 20 years ago by

Does innolith have a high power cell?

In addition to a high energy cell, Innolith has recently developed a high power cell on the same I-State platform. Development of the high-power cell that still retains exceptional energy density was possible due to the high conductivity of the I-State electrolyte (up to four times that of conventional Li-ion electrolyte).

Is innolith I-state a good electrolyte?

Innolith claims its I-State platform is "well suited for applications that require both high energy and high power". This is achievable due to the electrolyte's "exceptionally" high conductivity, up to four times that of conventional Li-ion electrolytes.

Innolith annuncia lo sviluppo della prima batteria ricaricabile da 1.000 Wh/kg al mondo. Un record mondiale su cui restano per&#242; molti dubbi ... Sicura, economica e con una capacit&#224; mai vista prima: l'Innolith Energy Battery assicura di possedere le qualit&#224; che si possano desiderare in una batteria ricaricabile e di poter rivoluzionare l ...

Die im deutschen Labor des Unternehmens in Bruchsal entwickelte Innolith Energy Battery soll

dementsprechend Reichweiten f&#252;r Elektroautos von &#252;ber 1.000 Kilometer mit einer einzigen ...

Innolith, a European developer of Li-ion battery cell technologies, has begun the commercialization of its I-State battery technology platform for use in electric vehicles (EVs) and e-mobility applications. The company says that I-State will cut EV costs and increase vehicle range through a high energy density of 300 Wh/kg (NMC811/Graphite ...

The other problem is safety - lithium ion batteries have an unfortunate tendency to catch fire and explode, which is obviously not favorable if they are in a car or an aircraft. Swiss start-up ...

Des Weiteren spricht f&#252;r die Innolith Energy Battery, dass sie die erste nicht brennbare Lithiumbatterie f&#252;r Elektrofahrzeuge darstellt. Erm&#246;glich wird dies dadurch, dass die ...

The Innolith battery cell technology is based on the proprietary liquid inorganic electrolyte that can operate at up to 5 volts without degradation, unlike the Li-ion batteries in use today that are limited to 4.2 volts. This gives the batteries higher gravimetric energy density of 300 Wh/kg and volumetric energy density of 825 Wh/L.

Die Innolith AG hat heute bekannt gegeben, an der Entwicklung der weltweit ersten wiederaufladbaren Batterie mit 1000 Wh/kg zu arbeiten. Die im deutschen Labor des Unternehmens entwickelte "Innolith Energy Battery" soll f&#252;r Elektrofahrzeuge Reichweiten von &#252;ber 1.000 km mit einer einzigen Batterieladung erm&#246;glichen.

Automobilwoche, Germany's premier automotive publication, has featured our I-State battery as it enters into commercial production. Michael Gerster notes how the I-State's inorganic electrolyte is the result of over 20 years of research and remarks upon the superior power the battery has in comparison to conventional Li-Ion batteries. Read Michael's article in ...

Basel - Das Energieunternehmen Innolith hat einen neuen Batterietyp entwickelt, der Elektroautos mit 1000 Kilometer Reichweite erm&#246;glicht. ... Innolith will seine Energy Battery zun&#228;chst &#252;ber eine Pilotproduktion in Deutschland auf den Markt bringen. Sp&#228;ter soll die Technologie an Batteriehersteller lizenziert werden. ssp.

H&#246;here Energiedichte verspricht mehr Reichweite bei Elektrofahrzeugen oder E-Flugzeugen. Innolith ist ein europ&#228;isches Cleantech-Unternehmen, das Lithium-Ionen-Batteriezellentechnologien entwickelt und seine I-State-Batterietechnologieplattform f&#252;r Elektrofahrzeuge und E-Mobilit&#228;tsanwendungen vermarktet. Ziel des forschungsgetriebenen ...

Innolith, a Swiss startup, says its new high-density lithium-ion batteries can do just that. The company claims to have made the world's first 1,000 Wh/kg rechargeable battery. (Watt-hours per kilogram is a unit of measurement commonly used to describe the density of energy in batteries.)

Innolith's battery uses an inorganic electrolyte that it claims makes it long-lasting and safe (Credit: Innolith AG) Innolith AG's 1000km electric vehicle battery. Following the projected three to five years of development, ...

Switzerland's Innolith, firms say the challenge of building economies of scale fast to compete head on means finding niches is a more likely path to success, for now. ... and these plans hinge on batteries to store renewable energy - and to power EVs. Researchers have already identified 13 European battery projects that could be eligible for

Die Schweizer Firma Innolith gibt an, eine wiederaufladbare Batterie mit einer bislang unerreichten Leistungsdichte von 1000 Wh/kg entwickelt zu haben. Die so genannte Energy Battery soll Reichweiten von über 1.000 Kilometern ermöglichen und gleichzeitig die Kosten erheblich senken.

In a separate news release, the company said that its new battery technology when used in an Innolith GridBank system will have a lifetime throughput of more than 60 GWh of energy over its 50,000 cycle lifetime, ...

Innolith AG is the world leader in rechargeable Inorganic Battery Technology. The company is based in Basel, Switzerland and it claims 1000 Wh/kg battery breakthrough with unprecedented levels of safety, durability, ...
