

Install solar power generation on the roof of your self-built house

Can solar panels be installed on a roof?

“The solar panels will need to be mounted on the roof by installers who understand roofing and will need some scaffold decks to safely get the panels to the roof.

Can solar panels be installed on a house?

If you're getting solar panels installed onto the roof of your house, the installers will need to construct scaffolding around the building before they can crack on with the process. This will take the most time out of all the steps - usually about a day - but will mean the installers can have safe and secure access to the roof.

Do solar panels generate electricity on a south-facing roof?

Solar panels generate most electricity when they're on a south-facing roof that's sloped at 41° and isn't shaded. It's one of the first things our surveyors look at when checking your home's right for solar. A good surveyor can talk you through how the panels' position on your roof will affect their performance.

Can you build your own solar panels?

To get straight to the point, yes, you can build your own solar panels, or at least partially, depending on the craftsmanship of each person. The process DIY includes sizing the solar panel system, choosing which components suits your needs, mounting and installing the solar panels, the solar inverter and safety disconnects.

How do solar panels connect to a house?

Solar panels are connected to your house in two ways: an electrical connection and a mechanical connection. Here's how both of these work, and what it means for your house. Your installer will connect the solar panels to the inverter through a series of wires that will travel through your roof.
