

Install the exhaust facilities in the generator room

How should a generator room be designed?

The generator room should have sufficient air circulation to exhaust heat and fuel exhaust. The exhaust chambers should be integrated into the generator design, and the air ducts should be designed to ensure that no gas or air can infiltrate the generator room.

Who designs and installs a generator exhaust system?

The proper design and functionality of a generator exhaust system falls on the responsibility of the engineering firm of record. If a field fabricated system is being utilized, the design and installation of the system must be a collaboration between the engineering firm and the installing contractor.

Does a generator room need air circulation?

Adequate ventilation is necessary to ensure that the generator operates efficiently and does not overheat. The generator room should have sufficient air circulation to exhaust heat and fuel exhaust.

Why do generator exhaust systems need to be properly designed?

Generator exhaust systems need to be properly designed to ensure correct engine performance and safe operation. System design has become more complex with the desire to keep emissions low, along with the desire to utilize the heat energy in the exhaust gas.

What temperature does a generator exhaust system emit?

Generator exhaust systems must also be engineered and properly installed to accommodate thermal expansion. Generator exhaust systems emit exhaust at temperatures anywhere from 500°F up to 1300°F depending on the unit size, manufacturer, and type of fuel burned.

Does a closed generator room need forced ventilation?

If possible, the surface of the exhaust pipe should be wrapped with heat insulating material to reduce heat dissipation to the room. 3. The machine room of a closed generator set generally does not require forced ventilation.

NFPA 110 requires that the room in which the EPS equipment is located shall not be used for other purposes that are not directly related to the EPS. (7.11.1) Parts, tools and manuals for ...

Your business' insurance company agrees to cover the indoor generator system. Your facility's design can handle heat and fume ventilation produced as a result of fuels, exhaust, generator lubrication and starting battery operations via proper ...
