

# Install the meter box for the photovoltaic inverter

How do you connect a solar inverter to a utility meter?

A junction box is added between the utility meter and the main service panel. Then the wires from the utility meter, the main breaker panel, and the PV solar are connected in the junction box. An adequately sized PV service disconnect box must be used prior to making the connection between the junction box and the solar inverter.

How does a utility meter connect to a solar panel?

There is an ALTERNATIVE UTILITY CONNECTION called a "Supply or Line Side" connection. This connection is made BEFORE the main breaker. A junction box is added between the utility meter and the main service panel. Then the wires from the utility meter, the main breaker panel, and the PV solar are connected in the junction box.

How to install PV modules in a microinverter?

You can install individual PV modules in any combination of Module quantity, orientation, different type and power rate The Ground wire (PE) of the AC cable is connected to the chassis inside of the Microinverter, potentially eliminating the installation of grounding wire (check local regulation).

How do I add a meter to my inverter?

Meter functionality is supported in inverters with CPU versions 4.2.xxx and above. 1. From the SetApp main menu, select Communication, and select the port to which the meter is connected - RS485-1 or RS485-2. 2. Select Protocol &#232; Modbus (Multi-Device) 3. Return to the RS485-x Menu and select Add Modbus Device &#232; Meter.

Where can I find the data from the inverters and installed meter?

The data from the inverters and from installed meters is displayed in the Dashboard and Charts tab of the monitoring platform. The displayed data depends on the meter(s) location: grid connection point (export), or load consumption point (consumption). The following tables detail the displayed information per meter location. RS485 Meter
