

What is the government electrification strategy in the Gambia?

The government electrification strategy has embraced both grid-based and off-grid options. The Gambia has abundant renewable energy resources that could help meet growing demand. The Gambia has abundant solar energy resources across the country, a good biomass resource in most areas, and a modest wind regime along the coast.

Is RE a solution to energy problems in the Gambia?

Policy makers across Africa have been among the last to embrace RE as a solution to their energy problems. They are often locked into crisis management on a day-to-day basis. The country's policy makers need to be persuaded that RE has a real future in the energy mix of The Gambia. They need to demonstrate this by their actions.

Does the Gambia have solar energy resources?

The Gambia has significant solar energy resources which can be deployed via solar PV plants, which have become price competitive with thermal plants and attractive for advancing national renewable energy and greenhouse gas (GHG) reduction targets. IRENA (2018) has estimated national solar potential at 428 MW.

Why is access to electricity important in the Gambia?

Providing access to electricity to support inclusive and sustainable socio-economic development is one of the pivotal cornerstones of the Gambia government's priorities as articulated in the national energy sector policies and strategies, and highlighted in the National Development Plan (2018-2021).

How will interconnected power infrastructure affect rural energy services in the Gambia?

The effect of a highly interconnected power infrastructure on rural energy services in The Gambia is uncertain, as most people will continue to rely on decentralised systems.

Why should the Gambia invest in solar energy?

To match the rising demand and to provide sustainable and accessible energy to all Gambians, the potential for solar energy investment is immense in The Gambia. The government of The Gambia seeks to increase RE's contribution to 40% from 2% presently in the coming years.

sustainable development, energy access, energy security and low-carbon economic growth and prosperity. About this document This technical report summarises the main outcomes and findings of the assessment of cost-effectiveness of renewable energy technology options in The Gambia and evaluates the potential to reduce greenhouse

At a total cost of \$165m, the Gambia Electricity Restoration and Modernization Project (GERMP) financed by the WB, EU & EIB remains the single largest energy project in The Gambia and promises to significantly

support the turnaround of the energy sector particularly as the Gambia accelerates its vision towards Universal Access.

energy policy to promote the deployment and use of renewable energy and energy-efficiency (Re/ee) technologies, in order to improve energy security and access to modern energy services. To fulfil this objective, the government has taken a number of steps: establishing The Gambia Renewable energy Centre (GReC); adopting a policy of zero import duty

renewable technologies, particularly solar PV, which is the least cost form of renewable energy in The Gambia. Providing access to electricity to support inclusive and sustainable socio-economic development is one of the pivotal cornerstones of the Gambia government's priorities as articulated in the

At a total cost of \$165m, the Gambia Electricity Restoration and Modernization Project (GERMP) financed by the WB, EU & EIB remains the single largest energy project in The Gambia and promises to significantly ...

UNDP's role in supporting access to clean energy. In 2022, UNDP worked with the Ministry of Petroleum and Energy, MoPE to engage private sector and a team of energy experts to install a green-mini-grid in one of The Gambia's most isolated off-grid communities in the Upper River Region, known as, Sare Demba Toro. UNDP collaborated with

The Gambia is highly competitive in its renewable energy potential compared to regional competitors. Unique Energy provides alternative power backup systems, electrical installations and renewable energy solutions with a focus on generating the cleanest and most cost-effective energy solutions for wholesale energy markets.

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided

Top 5 Reasons: Why Investors Should Choose the Gambia for Solar Energy 1. Attractive Domestic Market 2. Attractive Solar Opportunities 3. Strong Government Support 4. Stable Business Climate 5. Skilled & Cost Effect Workforce Driven by a steady growing population (2.42m growing at 3% p.a.), business expansions and rapid urbanization - the

The Gambia is highly competitive in its renewable energy potential compared to regional competitors. Unique Energy provides alternative power backup systems, electrical installations and renewable energy solutions with a focus on ...
