When using an inverter for emergency back-up power in a home without a vehicle there are a number of ways to accomplish this. First you can have, say, two 12 volt batteries hooked in parallel, and one inverter. This will give you enough power to run say a refrigerator off and on for two days or so depending on the size of the batteries.

Peak power demands play a crucial role in determining the appropriate sizing of inverters for various applications, especially in off-grid or backup power systems. An inverter's capacity must be sufficient to handle the maximum power demand that the system may experience at any given time. Here's how peak power demands affect inverter sizing:
