What is a Liam F1 wind turbine?

Created by the Dutch company The Archimedes, it is named after the Greek mathematician Archimedes, whose principles inspired the turbine's design. Unlike traditional wind turbines, the Liam F1's spiral shape allows it to capture wind more effectively, even in turbulent environments like cities.

What is the Liam F1 urban wind turbine warranty?

Warranty 14 days money back Refund within 14 days of invoicing The Liam F1 Urban Wind Turbine is a small wind turbine with a diameter of 1,5 meters which weighs approximately 100 kilograms. Due to its size and weight it is suitable for installation on almost every roof and wall.

How much energy does a Liam F1 generate?

As a result, the Liam F1 can consistently generate power regardless of the wind's direction or speed. With the ability to capture wind energy efficiently at wind speeds as low as 5 m/s, the Liam F1 produces approximately 1,500 kWh annually--enough to meet the energy needs of a typical urban home.

Is the Liam F1 quiet?

Unlike traditional horizontal axis turbines that can be very noisy, the Liam F1 is virtually silent, so you and your neighbors can enjoy a peaceful environment. Aesthetics matter when you install a turbine in a residential area.

Where should a Liam F1 turbine be installed?

You can install the Liam F1 on your roof, backyard, or commercial building, but choosing the right spot is key to getting the most out of it. Put the turbine where it will get the most wind, ideally in an open area with no large obstructions like tall buildings or trees.

Liam F1 Urban Wind Turbine. The Rotterdam-based tech firm The Archimedes has introduced its Liam F1 Urban Wind Turbine, which is said to have an energy yield that is "80 percent of the maximum that is theoretically feasible." That's quite the assertion, given that most conventional wind turbines average around 25 to 50 percent. (Video)

The Archimedes Screw Principle. But what's really impressive about this compact wind turbine is its design. Liam F1's spiral/screw-shaped rotor always points in the direction where the wind blows and converts its kinetic energy into mechanical energy. The gadget only needs winds of 3.8 knots (2 m/s) to start rotating and producing energy.
