

# Is using energy storage cabinet considered stealing electricity

What is electricity theft?

Electricity theft is the criminal practice of stealing electrical power. The practice of stealing electricity is nearly as old as electricity distribution. Electricity theft is accomplished via a variety of means, from methods as rudimentary as directly hooking to a power line, to manipulation of computerized electrical meters.

Why do people steal electricity?

Individuals try to bypass their meter completely so that it doesn't record any electricity usage at all. People commit electricity theft for a range of reasons, whether it's to avoid paying their bills, to help loved ones cope with energy costs - or to supply large amounts of electricity to illegal cannabis farms.

Why is electricity theft illegal?

People commit electricity theft for a range of reasons, whether it's to avoid paying their bills, to help loved ones cope with energy costs - or to supply large amounts of electricity to illegal cannabis farms. Whatever those reasons are, stealing electricity is illegal and is punishable in both criminal and civil courts.

Why are we legislating electricity storage?

Why are we legislating? Electricity storage covers a range of technologies that store low carbon energy for when it is needed, for example in batteries on the wall of your home or business, or in facilities that pump water to higher reservoirs when electricity is abundant, and let it flow back down through a turbine when it is scarce.

What is stay Energy SAFE?

Stay Energy Safe is a completely independent service, run on behalf of the energy industry by Crimestoppers Trust. Read more about how we protect your details [here](#). If you spot energy theft anywhere, speak up anonymously now. The punishment for stealing electricity depends on the severity.

Why are battery energy storage systems important?

Battery energy storage systems (BESSs) use batteries, for example lithium-ion batteries, to store electricity at times when supply is higher than demand. They can then later release electricity when it is needed. BESSs are therefore important for "the replacement of fossil fuels with renewable energy".
