

How can a Hypergrid increase grid resilience?

Increase grid resilience with a forward-looking approach to measure grid risk in the case of extreme weather events. The Hypergrid - a project comprised of overhead and undersea HVDC (High Voltage Direct Current) connections - represents a cost-effective and competitive solution to develop the national transmission grid.

How much of gridspertise's earnings came from networks?

More than 40% of its core earnings came from networks last year. "The company will help electricity distribution companies of any size and geography roll-out integrated smart grid solutions to meet the evolving needs of grid users and electricity end-customers," Gridspertise CEO Robert Denda said in a statement.

How much capacity does Italy have for the Green Deal?

Alberto Pototschnig, Florence School of Regulation, talked about capacity building for the Green Deal implementation. Fabio Genoese provided the conclusions and mentioned that Italy has already implemented non-wire solutions in four grid sections, resulting in a total increase in transport capacity of about 1450 MW.

Does Italy regulate transmission network development and transmission innovation?

Riccardo Vailati, ARERA, introduced some elements of regulation of transmission network development and transmission innovation for Italy, mentioning transmission innovation pilot projects as part of the approach.

The scheme notified by Italy will support the construction of electricity storage facilities with a joint capacity of more than 9 GW/71 GWh. The scheme will run until 31 December 2033. The measure aims to facilitate the integration of renewable energy sources ("RES") in ...
