

Where does energy come from in Italy?

Energy in Italy comes mostly from fossil fuels. Among the most used resources are petroleum (mostly used for the transport sector), natural gas (used for electric energy production and heating), coal and renewables. Italy has few energy resources, and most supplies are imported.

How much energy does Italy have?

Italy has few energy resources, and most supplies are imported. An important share of its electricity is imported, mainly from Switzerland and France. The share of primary energy dedicated to electricity production is above 35%, and has grown steadily since the 1970s.

How much solar power does Italy produce?

The International Energy Agency estimates Italian photovoltaic solar electricity production at 23,689 GWh in 2019, or 8.1% of total electricity production, ranking 6th in the world with 3.3% of world production, and 2nd in Europe.

What is the role of energy transformation in Italy?

How is energy used in Italy? Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

Who provides high voltage electricity in Italy?

The transmission of high voltage electricity in Italy is provided by Terna. The transmission network has 63,500 km of HV lines, 22 interconnection lines with foreign countries, 445 transformer stations.

What type of electricity is used in Italy?

Renewable electricity here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal power. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Italy: How much of the country's electricity comes from nuclear power?
