What is teraloop?

Teraloop is developing a breakthrough in utility scale storage to unlock the integration of renewable energy. View contacts for Teraloop to access new leads and connect with decision-makers. Teraloop is a grid-scale energy storage system that can provide a future alternative to batteries.

Where will teraloop pilot its flywheel energy storage technology?

With financial support from the European Commission in the framework of Horizon 2020, Teraloop will pilot its flywheel energy storage technology on Terceira Island, Azores archipelago. Teraloop is a kinetic energy storage solutions provider for Sustainable Mobility and Distributed Energy operators.

What is a teraloop rotor?

Teraloop's rotor is hub-less, which allows for up to 5 times higher energy storage capacity compared to a rotor with a central hub. To maximize both storage capacity and sustainability, the rotor is made of light-weight, strong and recyclable carbon fiber composite as well as a mechanically durable magnetic composite.

Could teraloop be a future alternative to batteries?

Teraloop is a grid-scale energy storage system that can provide a future alternative to batteries. Imagine a way to store energy that can meet the needs of the population, and provides a zero-waste solution that respects the Earth's natural resources. Growth no longer needs to come at the detriment of their environment. This is their long-term

Why did Yaskawa invest in teraloop?

Yaskawa Electric Corporation completed a strategic investment in Teraloop during March 2017. This equity investment enabled Teraloop to accelerate the steps needed to bring its storage solution to the market. The financing allowed the prototype to be finalised for a complete simulation in commercial working conditions.

Teraloop is revolutionizing the world of energy storage, with an innovative and patented configuration of existing, proven technologies: MAGLEV, flywheels and brushless electric motors. Their system consists of a large scale magnetically levitated rotor, which is charged and accelerated when surplus energy is available, and then discharges into ...

Teraloop's rotor is hub-less, which allows for up to 5 times higher energy storage capacity compared to a rotor with a central hub. To maximize both storage capacity and sustainability, the rotor is made of light-weight, strong and recyclable carbon fiber composite as well as a mechanically durable magnetic composite.

Teraloop's patented flywheel technology is scalable, efficient and sustainable. Our energy storage system operates in synergy with renewable generation assets, balancing the natural variation of supply and demand. It

can also be used to support battery storage, since flywheels endure frequent charging and discharging better than batteries.

Teraloop Oy wins the The Energy and Innovation Awards 2024, also known as the Oscar of energy technology. Teraloop solves the daily power management needs of the energy transition with its patented, modular kinetic electrical energy storage system.

Teraloop solves the daily power management needs of the energy transition with its patented, modular kinetic electrical energy storage system. Established in the Aalto innovation ecosystem in 2014, our vision is a fully renewable energy system.

Winner of 2024: Teraloop Oy - Frequency control and battery protection with kinetic energy. Teraloop solves the daily power management needs of the energy transition with its patented, modular kinetic electrical ...

Teraloop was founded to conduct inherently responsible and sustainable business activities. We aim to act responsibly, with integrity and taking into consideration the socio-economic and environmental context in which we ...
