

JA Solar Panel Fire

Are JA Solar modules self flammable?

It turned out that, during the Class A test conducted at Intertek, the JA Solar's Type-1 modules subjected to the test not only withstood the inferno-like heat without becoming self-flammable; the flame torch was not even able to burn through the PV panel.

Did JA Solar pass UL 1703 fire test?

JA Solar Holdings Co., Ltd. today announced its standard modules successfully passed the Class A fire test in accordance with UL1703 standard for Type 1 modules. During the test, all six sets of BOM used for JA Solar's type-1 modules passed the UL Class A fire test conducted by Intertek.

What are JA Solar modules?

JA Solar Modules are designed to meet the requirements of IEC 61215:2016 and IEC 61730:2016, application class A. Modules rated for use in this application class may be used in system operating at greater than 50V DC or 240W, where general contact access is anticipated.

Can JA Solar modules be installed on a roof?

JA solar modules have been listed as Class A according to IEC 61730-2 standard. For roof installations, modules should be mounted over a fire resistant covering suitable for this application, with adequate ventilation between the modules backsheet and the mounting surface. Roof constructions and installations may affect the fire safety of building.

Do JA Solar modules corrode?

JA Solar modules have passed the IEC 61701 salt-mist, but galvanic corrosion can occur between the aluminum frame of the modules and mounting or grounding hardware if such hardware is comprised of dissimilar metals.

What happens if a JA Solar module is faulty?

Faulty connections can result in arcs and electrical shock. Check that all electrical connections are securely fastened. Make sure that all locking connectors are fully engaged and locked. The junction boxes used with JA Solar modules contain bypass diodes wired in parallel with the PV cell strings.
