

Is China a major market for solar photovoltaics?

Provided by the Springer Nature SharedIt content-sharing initiative In recent years,China has become not just a large producer but a major market for solar photovoltaics(PV),increasing interest in solar electricity prices in China.

What is the role of solar photovoltaic power generation in China?

Among alternative sources, solar photovoltaic (PV) power generation is expected to play an important role in this process in China given abundant solar resources and huge PV manufacturing capacity ( 7 - 10 ).

Does a globalized solar photovoltaic module supply chain save money?

Modelling shows that a globalized solar photovoltaic module supply chain has resulted in photovoltaic installation cost savings of billions of dollars.

Does China have a price threshold for solar power?

The cost of solar PV electricity generation is affected by many local factors, making it a challenge to understand whether China has reached the threshold at which a grid-connected solar PV system supplies electricity to the end user at the same price as grid-supplied power or the price of desulfurized coal electricity, or even lower.

Does China have a solar PV Grid parity roadmap?

As early as 2011,the National Development and Reform Commission (NDRC) Energy Research Institute conducted a detailed analysis of the solar PV grid parity trajectory in China,and proposed a roadmapwith two scenarios.

Can photovoltaic electricity be compared to grid prices in China?

Although solar photovoltaic use grows rapidly in China,comparison with grid prices is difficultas photovoltaic electricity prices depend on local factors. Using prefecture-level data,Yan et al. find that 100% of user-side systems can achieve grid parity,while 22% can produce electricity cheaper than coal-based power plants.

We reveal that all of these cities can achieve--without subsidies--solar PV electricity prices lower than grid-supplied prices, and around 22% of the cities" solar generation ...
