

Can Jordan improve energy security?

Jordan has significant potential to succeed in scaling up its use of renewables, particularly in electricity generation, which could reduce energy prices for consumers and improve energy security.

How much electricity does Jordan generate?

Imported natural gas and oil still account for approximately 76% of the electricity generated. Domestic resources, including renewable and traditional energy sources, represent 22% of the energy supply. However, the Jordanian government plans to generate 48.5% of electricity using local sources.

Are PV systems the most cost-effective option for electricity generation in Jordan?

They found that PV systems are Jordan's most cost-effective option for electricity generation. They studied and contributed to different aspects of renewable energy in Jordan, including technological solutions, potential sources, policies, economic viability, and challenges.

What is the primary energy supply in Jordan?

illustrates the breakdown of total primary energy supply in Jordan by source. Imported natural gas and oil still account for approximately 76% of the electricity generated. Domestic resources, including renewable and traditional energy sources, represent 22% of the energy supply.

Can PV systems reduce peak demands and energy costs in Jordan?

In Ref. [110], scholars reported that PV systems could be used to reduce peak demands and energy costs in Jordan. The study shows that installing PV systems can reduce energy costs by up to 10% for large commercial buildings.

How stable is Jordan's electricity sector?

Jordan's electricity sector has been characterized over the past few decades by the stability of its technical performance.

The objective of this research is to design a reverse osmosis desalination plant in Jordan Valley using clean and sustainable energy source. The village of Az-Zubaidat's well water is taken as a case study. According to World Health Organization (WHO) Az-Zubaidat's well water is not potable and need to be purified. The total dissolved solids (TDS) of Az-Zubaidat's well water is ...

The aim of this research is to examine the techno-economic viability of both off-grid and on-grid hybrid renewable energy systems for Jordan's Al-Karak governorate. ... connected to the grid with batteries for storage is the optimal configuration for sustainable Al-Karak governorate electrification whilst achieving environmental benefits and ...

Jordan optimal energy limited

Jordan is a country with highly fossil fuel deficiency and thus other energy sources are needed to be explored. Solar energy in Jordan is highly recognized as a good source of energy and an ...

Policymakers are tasked with both driving the rapid expansion of renewable energy technologies and, additionally channelling the limited national potential of biomass into areas where it can provide the greatest benefit to the energy system. But do current policy instruments promote the use of biomass in these areas? As biomass is limited, its use must be ...
