

What is the main energy source in Laos?

As of 2018, most of primary energy comes from coal (60.7%), followed by hydropower 30% and oil 18%. Hydropower is a significant resource in Laos, with 22.5 TWh electricity generated in 2018. However, the national electrification rate was 94.2% in 2017.

How much electricity does Laos use?

Hydropower is a significant resource in Laos, with 22.5 TWh electricity generated in 2018. However, the national electrification rate was 94.2% in 2017. The purchasing rate of electricity in Lao PDR is 0.07 USD/kWh and consumed on the average of 724.3 kWh per capita.

Does Laos have a solar power plant?

In addition to hydropower, Laos has also been exploring other renewable energy sources, such as solar and biomass. The country's first large-scale solar power plant, with a capacity of 10 MW, was commissioned in 2018, and several other solar projects are currently under development.

Is Laos a power hub?

As part of the Greater Mekong Subregion (GMS) and the Association of Southeast Asian Nations (ASEAN) Power Grid, Laos has been actively participating in cross-border power trade and interconnection projects. The country's strategic location, combined with its abundant hydropower resources, makes it an ideal hub for regional power trade.

Why is Laos a good hub for regional power trade?

The country's strategic location, combined with its abundant hydropower resources, makes it an ideal hub for regional power trade. In fact, Laos currently exports around 70% of its electricity to neighboring countries, and this figure is expected to rise in the coming years as more hydropower projects come online.
