

Liberia bioferm energy systems

What is BIOFerm energy systems?

BIOFerm™ Energy Systems provides anaerobic digestion technology for energy generation and waste management to North American waste operations.

What is biofermtm technology?

Committed to sustainable and economical organic waste diversion, the BIOFerm™ technology utilizes anaerobic digestion to harness biogas rising from fermenting organics--food waste, manure, biosolids, etc.--converting it into valuable green energy, heat, fuel, and more.

Can natural gas be used in BIOFerm?

Natural gas can only be used to best effect once it is freed of hydrogen sulfide, volatile organic compounds, and siloxanes. This is done by passing it through large adsorbers filled with BIOFerm's activated carbon.

What sets BIOFerm apart?

BIOFerm strives to be the industry leading one-stop shop for turnkey facilities that generate value for waste producers and communities throughout North America*. **Collaboration is essential for success, both internally and with our customers. Honesty is a core value, and we conduct business in an open and transparent manner.

Why should you choose BIOFerm?

Choosing BIOFerm for anaerobic digestion offers you the convenience of a single point of contact and wrapped contracts, as opposed to dealing with multiple contractors and conflicting technologies. Our facilities have integrated programming and similar equipment, ensuring streamlined operations.

How does a PFR tank function?

A PFR (Plug Flow Reactor) tank functions with a steel tank having a rectangular footprint and a horizontal paddle mixer that runs the full length of the tank. The mixer is powered by planetary drive units at both ends, and the tank is heated through the horizontal mixer shaft. Depending on the project, solid or liquid feeding systems are utilized. PFR is often combined with CSTR (Continuous Stirred Tank Reactor) tanks.

The BIOFerm system is a batch type system that uses the principle of dry fermentation anaerobic digestion in the mesophilic temperature range. The BIOFerm dry fermentation process is well ...

BIOFerm is a Wisconsin-based renewable energy company providing turnkey anaerobic digestion and gas upgrading facilities. Committed to sustainable and economical organic waste diversion, BIOFerm's digester and gas processing technology harnesses biogas from fermenting organics--food waste, manure, biosolids, etc.--and converts it into valuable green energy, ...
