How does Echogen work in generating power?

Echogen converts wasted heat into higher value power using its expertise in sCO₂-based power cycle technology.

What is echogen SCO 2?

Echogen has developed next generation technology for a wide range of power generation applications. The sCO₂ cycle offers improved performance and significant operational advantages over steam and ORC cycles for both combined-cycle systems and primary power plants.

Why should you choose echogen?

The world's energy landscape is changing. The increased use of renewable sources, the drive for lower emissions and the volatility of fossil fuel prices have put an unprecedented premium on efficiency and advanced technologies. A compact, water-free solution with remote operation capabilities and best-in-class efficiency is what Echogen offers.

We are looking for new partnerships to further the development of the PTES system. With 12 years and over \$85MM invested in water-free, sCO₂ power cycles, Echogen is uniquely positioned to develop a commercial pilot plant. Echogen is executing a \$3M contract to ARPA-E to design and build a proof-of concept kW scale PTES system.

Siemens Energy has licensed Echogen Power System's patented technology. Echogen's technology uses sCO₂ as the working fluid in a closed-loop power cycle to collect waste heat from the source and convert it to electrical power. By deploying sCO₂-based waste heat recovery solutions, industrial operators in the oil & gas, power generation ...

Echogen Power Systems sCO₂ Technology Benefits 6 oTotally dry, water-free, closed-loop process Water-Free oAir cooled condenser (water cooled condenser optional) oNo exhaust bypass stack required Compact o25-40% smaller footprint than steam; minimally invasive retrofit oSuitable for remote operation; no boiler operator required Flexible o20-30 minutes to full load

Echogen then converted the heat pump to a WHP engine, reducing to practice a first approach to the power generation cycle. A second prototype system, completed in early 2009, used pure carbon dioxide and proved

that a transcritical cycle heat engine could be built to produce electricity from waste heat for commercial applications, and ...
