

What is Luxembourg's energy system like?

Luxembourg's energy system is characterised by high import dependence and reliance on fossil fuels. In 2018, 95% of its energy supply (100% of oil, natural gas and biofuels and 86% of electricity) were imported. It had the fourth-highest share of fossil fuels in TPES (78%) and the highest share of oil in TPES (60%) among IEA member countries.

How much electricity does Luxembourg use?

Electricity sector in Luxembourg is the main article of electricity in Luxembourg. Primary energy use in Luxembourg was 48 TWh in 2009, or 98 TWh per million inhabitants. Luxembourg is a net energy importer; 81.5% of the electricity consumed in the country, for example, was imported from neighboring European countries in 2021.

Is Luxembourg a net energy importer?

Luxembourg is a net energy importer; 81.5% of the electricity consumed in the country, for example, was imported from neighboring European countries in 2021. There was no decline in the climate change gas emissions (CO<sub>2</sub>) from year 2008 to 2012 in Luxembourg. There was no better efficiency in the use of electricity from 2008 to 2012.

Why does Luxembourg have a low energy cost?

The low costs of energy in Luxembourg and the high purchasing power of its residents represent a significant barrier to achieving the energy sector targets. Low taxes result in low electricity, natural gas and heating oil prices providing little incentive to invest in renewables and energy efficiency.

What are Luxembourg's Energy Policy Priorities?

Since the 2014 IEA review of Luxembourg's energy policies, the country has made progress on its energy sector priorities of ensuring security of supply, promoting energy efficiency, increasing the use of renewable energy and reducing greenhouse gas (GHG) emissions.

Does Luxembourg need a new electricity infrastructure?

Luxembourg aims to cover over a third of 2030 electricity demand with renewables, mostly through variable renewable energy (VRE) from PV and wind generation. The share of VRE generation in imported electricity is also expected to increase significantly. Taken together, these factors will require substantial investment in electricity infrastructure.

Communiqué de presse Klima-Agence Luxembourg, le 15 mars 2022. myenergy devient Klima-Agence. Le moment idéal pour accélérer la transition énergétique et climatique et réduire notre dépendance des énergies ...

On 4 January 2023, the Minister for Energy, Claude Turmes, presented the new measures to help households in the context of rising energy prices, and gave an overview of the efforts made to reduce energy consumption in Luxembourg.

The National Energy and Climate Plan (PNEC) of Luxembourg outlines the country's strategy to achieve its energy and climate objectives by 2030. Submitted to the European Commission, this roadmap aims to reduce ...

Regarding the share of renewable energy in gross final energy consumption, the objective is to reach 25% by 2030 through a constant deployment of wind, solar and heat pumps in Luxembourg. For the energy efficiency dimension, the ambition is to reach a rate of 40 to 44% by 2030, by moving away from fossil fuels in new construction, by increasing ...

SummaryOverviewElectricityRenewable energyClimate changeSee alsoEnergy in Luxembourg describes energy and electricity production, consumption and import in Luxembourg. Electricity sector in Luxembourg is the main article of electricity in Luxembourg. Primary energy use in Luxembourg was 48 TWh in 2009, or 98 TWh per million inhabitants. Luxembourg is a net energy importer; 81.5% of the electricity consumed in the country, for example, was imported from neighboring European countries in 2021.

Did you know Luxembourg was among the EU countries to overachieve their 2020 renewable energy consumption target?. In January 2008, the EU committee published 20-20 by 2020 proposals regarding climate safety and energy renewability. These proposals included a 20% trimming of greenhouse gas (GHG) emissions and a 20% growth in the fraction of ...

However, for Luxembourg to reach its renewable energy goal set by the European Union for 2020, namely 11 percent, the share of consumed energy derived from renewable sources should increase...

All united for solar energy. Luxembourg wants to accelerate the timelines for renewable energies in order to reach around 25% clean energy by 2030 and 100% in the long term. With this in mind, the aid scheme for the promotion of photovoltaic energy has been strengthened since 2019 and increasingly involves private individuals.
