What is solar PV & why is it important?

Solar PV accounted for 4.5% of total global electricity generation, and it remains the third largest renewable electricity technology behind hydropower and wind. China was responsible for about 38% of solar PV generation growth in 2022, thanks to large capacity additions in 2021 and 2022.

Is solar PV a good source of electricity?

The potential for clean, carbon-free electricity generation from solar photovoltaic (PV) sources in most countries dwarfs their current electricity demand. Around 20% of the global population lives in 70 countries boasting excellent conditions for solar PV.

What is the average solar PV output per kilowatt hour?

In total, 93% of the global population lives in countries that have an average daily solar PV potential between 3.0 and 5.0 kWh/kWp. Around 70 countries boast excellent conditions for solar PV, where average daily output exceeds 4.5 kilowatt hours per installed kilowatt of capacity (kWh/kWp) - enough to boil around 25 liters of water.

How many PV panels are in a PV array?

A PV array can be composed of as few as two PV panels to hundreds of PV panels. The number of PV panels connected in a PV array determines the amount of electricity the array can generate. PV cells generate direct current (DC) electricity. DC electricity can be used to charge batteries that power devices that use DC electricity.

What is the IEA photovoltaic power systems technology collaboration programme?

The IEA Photovoltaic Power Systems Technology Collaboration Programme, which advocates for solar PV energy as a cornerstone of the transition to sustainable energy systems. It conducts various collaborative projects relevant to solar PV technologies and systems to reduce costs, analyse barriers and raise awareness of PV electricity's potential.

How efficient are solar panels?

The efficiency of commercially available PV panels averaged less than 10% in the mid-1980s, increased to around 15% by 2015, and is now approaching 25% for state-of-the-art modules. Experimental PV cells and PV cells for niche markets, such as space satellites, have achieved nearly 50% efficiency.
