Step 3: Heat-shrink the tubing. Step 4: Cut the wire of your phone charger. Step 5: Flux, join, and heat-shrink the loose leads.

How to transport a solar cell phone charger?

To make transportation of your solar cell phone charger easier a carrying case or a stand is quite useful. A small box, or case can be a very useful way to keep your charger safe and secure whenever traveling with it. We simply used a small plastic container tucked the wires and batteries in it and put the solar panels on top.

What is a solar-powered mobile charger?

A solar-powered mobile charger is a device that could charge cellphones with the help of solar radiation. A compact solar panel is the primary component of a solar mobile charger. The solar panel captures the energy coming from the sun and generates an output voltage. Nonetheless, the light radiation that falls on the solar panel can differ.
