

Maldives supa energy

What is the main energy source in Maldives?

In Maldives, the main energy source is imported fossil fuel (99.9%), with the bulk being diesel. This fuel is used primarily for electricity production and transportation.

How will aspire and rise help the Maldives' energy transition?

World Bank-financed projects ASPIRE and ARISE support the Maldives' energy transition by installing more than 53.5 megawatts of solar capacity and 50-megawatt hours of battery storage. This will reduce Maldives' annual import bill by about \$30 million, with a project lifetime saving of \$756 million over 25 years.

How much tCO₂ does Maldives emit per year?

Maldives, aiming for low carbon development, emits over 80% of its total emissions from energy use. During this period, the emission from energy use has been increasing at a rate of about 6-8% per year. This results in an annual emission of 75,527 tCO₂ from the energy sector alone.

Does Maldives have an electrical power system?

All power systems and electrical installations in Maldives must comply with the regulations of the Maldives Energy Authority. No interconnection between the islands exists as of today. Both public utility companies (FENAKA and STELCO) are owned by the Ministry of Finance.

What is the primary energy conversion in Maldives?

In Maldives, the primary energy conversion is from diesel energy to electricity. Nearly 100% of all electricity produced in Maldives comes from diesel-based systems. The generation and distribution of electrical systems are decentralized, with each separate island operating a self-sustaining diesel power generation and distribution system.

Why does Maldives need electricity?

Therefore, there is a need for an improved, reliable, and efficient electricity supply to improve the health care services on these islands. 39. The population of Maldives has traditionally been dependent on well-water and rainwater for drinking, cooking, washing, bathing, and irrigation purposes.
