

Mars solar international Saint Helena

What is a connect Saint Helena microgrid?

The agreement with Connect Saint Helena Ltd includes a microgrid for the South Atlantic island that combines a 568 kWp/500 kW solar farm; a three-turbine, 2.7 MW wind farm; and a 3.2 MWh/3.5 MW battery.

How can connect Saint Helena reduce reliance on diesel power?

Connect Saint Helena Ltd is committed to reducing reliance on diesel power generation by harnessing renewable energy sources. Renewable energy is cheaper to produce and does not harm the environment. We currently have 12 wind driven turbines located at Deadwood Plain. These turbines provide in excess of 20% of the islands electricity.

How many generators does connect Saint Helena have?

We have 4 generators which have a total capacity of 5,400kW. Connect Saint Helena Ltd is committed to reducing reliance on diesel power generation by harnessing renewable energy sources. Renewable energy is cheaper to produce and does not harm the environment.

How does connect Saint Helena generate electricity?

At present approximately 75% of the islands electricity is generated from burning fossil fuel (diesel). We have 4 generators which have a total capacity of 5,400kW. Connect Saint Helena Ltd is committed to reducing reliance on diesel power generation by harnessing renewable energy sources.

Article: December's Night Sky For many years, from 1985 on Radio St Helena until his death in 2015, Stedson George published monthly in our local newspapers a description of what would be happening in our night sky that month. Choosing an example is impossible, so we have reproduced below his last contribution, from December 2014 {6}. Apart from being the last ...

The electricity generation data for all our solar sites is publicly accessible on line. To find out how to access this information, please see the article Sunnyportal - Solar Energy. Below is a graph showing the amount of electricity (kWh) ...

SEE ALSO: Our page on Recycling and the related subject of Endemic Species. Our current renewable energy sources. Our earliest renewable energy source was the wind turbine electricity generators on Deadwood Plain. The original three turbines, installed in or around the year 2000, were expanded to six in October 2009 and since April 2014 have been expanded to twelve.

SHG has been made aware that the operation of an additional sea freight service to St Helena is being considered by a private shipping company, under the agency of Meihuizen International. Last year SHG invited tenders from parties interested in providing a longer term sea freight service to the island. Following a procurement process, SHG [...]

During her address she noted that whilst St Helena currently generated 21% of its electricity supply through renewables (wind and solar), this Government's goal is to deliver 80% of the Island's energy demand from renewables by the year 2027/28, sooner if possible. To this end, last month the Executive Council endorsed a new Renewable ...
