What is a utility-scale solar farm?

Utility-scale solar farms have a total capacity of 100 GW nationwide--enough to power 22 million homes. Utility-scale solar is the 3rd-largest source of renewable energy--and growing. The solar industry employs nearly 261,000 Americans across all 50 states. Solar is transforming our electric grid for the better.

Are utility-scale solar farms a good investment?

In the United States, utilities and companies across the country are investing in utility-scale solar farms to capture the sun's energy at a larger scale. Utility-scale solar is a major economic contributor. The industry has invested nearly \$195 billion in projects nationwide.

Does albioma have a power plant in Martinique?

Against the backdrop of the energy transition, this new facility, Galion 2, covers approximately 15% of the island's power needs, while also enabling the share of intermittent energy sources such as solar power to be increased. Alongside the Group's thermal biomass activity, Albioma operates a fleet of photovoltaic power plants in Martinique.

How much energy does Martiniquan generate?

In 2018, these installations supplied 17.6 GWh of renewable electricity to the Martiniquan network, representing nearly one quarter of all photovoltaic power generated on the island. As well as contributing to the regional energy transition, this output is set to increase by around 500 kWp in 2019, as new projects come onstream.

What is a utility scale solar project?

Compared to residential or commercial rooftop solar installations, utility scale projects are ground-mounted systems that range in size from 5 megawatts (MW) to over 1 gigawatt (GW). The threshold for a solar project to be considered utility scale is generally accepted to be around 5 MW, which can power around 1,000 homes.

What are the benefits of a utility scale solar system?

In addition to fixed cost savings, utility scale solar benefits from bulk equipment purchases and simplified design and construction processes. Large solar developers are able to negotiate lower prices on solar panels, inverters, and other balance of system costs.

PV Tech has been running PV ModuleTech Conferences since 2017. PV ModuleTech USA, on 17-18 June 2025, will be our fourth PV ModuleTech conference dedicated to the U.S. utility scale solar sector.

Not just with the solar panels, but with all of the components that make up a utility-scale solar power, including the software, trackers, racking systems, and more. We believe that the quality of products will have a direct impact on the performance of the solar farm, so we take great care in selecting the right materials.
