

Does Mauritius use solar energy?

Mauritius has an attractive potential for solar energy, with an average annual solar radiation value of some 6 kWh/m²/day. Solar photovoltaic (PV) energy is an option due to the almost year-round intensive sunlight. To achieve the target of 60 percent renewable energy by 2030, Mauritius has commissioned six more solar farms.

How does Mauritius generate energy?

Mauritius generates energy through various means including wind farms, solar energy, biomass, wave, and waste-to-energy projects. Currently, bagasse (sugarcane waste) is the leading source, contributing 13.3 percent to the renewable energy generation. Mauritius derives other renewable electricity from hydro, wind, landfill gas, and solar.

How has the Mauritian government changed the energy sector?

The Mauritian government has made significant changes in the energy sector. In particular, it created the Mauritius Renewable Energy Agency (MARENA) in 2016 to promote the use of renewable energy in Mauritius.

Does Mauritius need a battery energy storage system?

Mauritius aims to increase the share of renewable energy sources in its energy mix, which leads to fluctuating power injection. To reduce this fluctuation from variable renewable energy sources, the installation of Battery Energy Storage Systems (BESS) is required.

Is biomass a source of electricity in Mauritius?

Traditional biomass, such as the burning of charcoal, crop waste, and other organic matter, is not a source of electricity in Mauritius. However, it can be an important source in lower-income settings. Mauritius gets its electricity from nuclear power and renewable sources, which are low-carbon options.

Does Mauritius have a waste-to-energy project?

Mauritius produces about 500,000 tons of solid waste per year and its only landfill site is nearly full. In 2016, CEB (Mauritian utility company) issued a Request for Proposals for a 24 MW waste-to-energy project. Accordingly,

Renewable Energy Mauritius emits 0.01% of the Global GHG emissions, and yet, the country is committed to its pledge towards a sustainable and low-carbon economy through the implementation of a multi-fold strategy including: Reducing greenhouse gas emission by 40% by 2030; Increasing of the share of renewable energy in the electricity mix to 60% by ...
