

Which energy transition metals should Angola invest in?

In recent years, the main energy transition metals that have been of interest to Angola's investors have been cobalt, nickel and copper. However, a listed junior is now targetting lithium, an essential metal for battery manufacturing, which is highly sought after on the African continent.

Does Angola need solar energy?

Angola already boasts an impressive renewable energy component in its energy matrix, primarily derived from water resources. However, we recognise the potential for solar energy to complement this matrix and provide essential energy security.

Are Angola's lithium resources in the limelight?

The mineral is essential for the manufacture of batteries, a key element in the energy transition, and has become highly sought after. However, Australian Securities Exchange (ASX)-listed junior Tyranna Resources may put Angola's lithium resources in the limelight.

How can solar energy be harnessed in Angola?

The most appropriate technology to harness the solar resource in Angola is the production of electricity through photovoltaic systems. This technology currently presents the fastest installation time (less than 1 year) and lowest maintenance costs.

Is electricity a viable alternative to diesel in Angola?

Medium and large scale projects in the Eastern System and in isolated systems - without batteries - present in Angola a levelized cost of electricity inferior to \$0,2/kWh, representing therefore an economic alternative to diesel.

How will MCA contribute to Angola's solar generation capacity?

MCA aims to contribute significantly to the country's solar generation capacity, leveraging the expertise gained from our ongoing solar projects. This project will be closely intertwined with efficient water resource management. While Angola is rich in water resources, changing climate patterns necessitate comprehensive water management.

HE3DA je technologickou platformou, která splňuje veškeré předpoklady pro spuštění a masového zavedení na trh. Společnost dokončila vývoj akumulátoru s technickými a ekonomickými parametry umožňujícími jeho masovou výrobu jako velkokapacitní, zložitou a ...
