Why did we choose a microgrid project?

The microgrid industry has been busy -- there was no shortage of projects to choose from. In fact, our initial list netted twice what we needed. Since it's 2022 not 2044, we had to do some serious culling. We chose these projects for their innovation, ability to serve as models and demonstration of microgrid benefits.

How does government support microgrids?

Support for microgrids comes from research and development (R&D) programs at federal and state levels, software and tools, grants and funding support to incentivize demonstration projects, and tax and financial incentives for the installation of distributed energy [2, 3, 6, 126].

How a microgrid is developed in the EU?

In the EU, microgrid development is accompanied with comprehensive R&D efforts supported by a series of EU's Framework Programs (FPs). Demonstration projects are developed starting in FP 5 to now with focus on island and remote microgrid system, utility scale multi-microgrid, control and operation.

What drives microgrid development?

The driving forces in microgrid development at the state and local levels include renewable energy requirements as reflected in renewable portfolio standards (RPS) in 29 states and Washington, DC; renewable portfolio goals in eight states; and increasing concerns regarding power system resilience due to growing extreme climate events [38, 39, 40].

How can microgrids improve community energy resilience?

Clean, renewable hydrogen 1 microgrids can enhance community energy resilience by leveraging distributed renewable energy production, storage, and use. Local energy generation reduces strain & supports the electric grid. Supplies critical and emergency energy with zero greenhouse gas emissions during power outages.

How does a microgrid work?

A microgrid can connect and disconnect from the grid to enable it to operate in both grid-connected or island-mode."1 Many other organizations define microgrids with very similar definitions, including the concept of a system of multiple loads and generation, and of islanding from the grid.
