Do policy measures affect the economic optimal configuration of microgrids?

The current available literature on the impact of policy measures on the economically optimal configuration of microgrids considers microgrid sizes ranging from single buildings up to entire communities, but without explicitly controlling for the effects of microgrid size on the reported results.

#### Do microgrid policies cover the smart grid?

An early step of microgrid development at an organizational or national level often starts with microgrid policies. In this study, the documented microgrid and smart grid policies were scrutinized. A review process covered the smart grid because the microgrid was considered as a subsystem of the smart grid(IEC,2017).

#### Does a microgrid have a methodological approach?

The reviewed papers focusing on only the operational decisions involved in the economic operation of a microgrid are, while more varied, still in overall consensus where methodological approach is concerned. Both and take the short run operational and emission costs into account.

What are the key drivers of microgrid policies?

The reviewed literature showed key drivers of microgrid policies, the crucial motivations for developing microgrids. The key drivers were classified into four broad groups, i.e., 1) electricity access, 2) wealth creation and distribution, 3) environmental protection, and 4) technology development, shown in Figure 2.

Are microgrids a viable business model?

The ownership and business models of microgrids are still evolving. Microgrids are now emerging from lab benches and pilot demonstration sites into commercial markets, driven by technological improvements, falling costs, a proven track record, and growing recognition of their benefits.

### What role do microgrids play in delivering resiliency and economic benefits?

For example, the role of microgrids that encompass DERs for delivering reliability and resiliency benefits to the grid and bringing economic benefits to the DERs is in early stages of development with the REPAIR tool co-funded by the Microgrids R&D program. Market rules and participation options are constantly evolving.
