

What barriers hinder the deployment of microgrids?

This survey investigates the policy, regulatory and financial (economical and commercial) barriers, which hinder the deployment of microgrids in the European Union (EU), United States (USA) and China. In this paper, a clear view on microgrid policy instruments and challenges are investigated to aid future developments.

## 1. Introduction

What policies have been implemented to promote the development and adoption of microgrids?

Several countries have implemented policies to promote the development and adoption of microgrids. In the United States, the Federal Energy Regulatory Commission (FERC) has implemented Order-2222, establishing rules enabling microgrids to participate in wholesale energy markets.

Are microgrid policies related to distributed energy policies?

Many studies exist on microgrid technologies and operation, but few studies on policies, incentives and barriers to microgrid promotion and deployment. It is to be understood that microgrid policies are unavoidably related to distributed energy policies and precisely renewable energy.

What is the regulatory approach to microgrids?

In addition, the regulatory approach towards microgrids depends on EU Member States granting energy communities the right to manage part of the distribution network, which now depends on the discretion of the Member States.

Why are regulatory and policy frameworks important for microgrids?

Regulatory and policy frameworks are crucial in facilitating the growth and acceptance of microgrids. However, several challenges related to these frameworks need to be addressed. One of the primary issues is the variation in regulations that govern microgrids across different countries and states.
