

When $C_p(t) \leq 0$, the microgrid purchases electricity from the EVs; when $C_p(t) > 0$, the microgrid exchanges power with the distribution network, respectively. The climbing rate r_i ...

The uncertainty and volatility of distributed generation (DG) will significantly influence on the grid-connected operation of microgrid, leading to a lack of sufficient utilization of renewable energy. ...

By observing Table 3, it can be seen that due to the consideration of cooperative game among the IEM cluster members in case 4, the purchase electricity price is reduced, ...

The microgrid operator is able to purchase active and reactive power from the local distribution market. An effective short-term scheduling of the microgrid is implemented to ...

The technologies that support smart grids can also be used to drive efficiency in microgrids. A smart microgrid utilizes sensors, automation and control systems for optimization of energy production, storage and distribution. Smart microgrids ...

The electricity purchase price for the microgrid from the upper distribution networks is based on the TOU, which was 0.37\$/kW·h for the period 0:00-7:00, 0.69\$/kW·h for the period 7:00-23:00, and 0.45\$/kW·h for the period 23:00-0:00.

(p_{ds}^{buy}) represents electricity purchase price from the main grid to the distribution network. Constraints: (q_{ds}^{buy}) is equal to the sum of the power from the ...

The SHP is power distribution compatible, and it is versatile in achieving network balance between voltage profile and reactive power using an excitation system [10]. Hence it ...

On the other hand, the energy storage units are generally costly and require frequent replacement, thus the aging cost of energy storage systems is factored into the cost ...

Abstract: The uncertainty and volatility of distributed generation (DG) will significantly influence on the grid-connected operation of microgrid, leading to a lack of sufficient utilization of renewable ...

As an effective utilization form of clean power sources, it is of positive significance to study the trading strategy of microgrids in the intelligent power distribution system under the ...
