# Microgrid structure function analysis diagram

What is the function of microgrid control?

OLAR PRO.

The function of microgrid control is of three sections: (a) the upstream network interface, (b) microgrid control, and (c) protection, local control. Microgrid control is assessed in many studies, and it can be grouped based on the tree diagram, Figure 8.

### What are the components of microgrid control?

The microgrid control consists of: (a) micro source and load controllers, (b) microgrid system central controller, and (c) distribution management system. The function of microgrid control is of three sections: (a) the upstream network interface, (b) microgrid control, and (c) protection, local control.

### What is the nature of microgrid?

The nature of microgrid is random and intermittent compared to regular grid. Different microgrid structures with their comparative analyses are illustrated here. Different control schemes, basic control schemes like the centralized, decentralized, and distributed control, and multilevel control schemes like the hierarchal control are discussed.

What are the studies run on microgrid?

The studies run on microgrid are classified in the two topics of feasibility and economic studies and control and optimization. The applications and types of microgrid are introduced first, and next, the objective of microgrid control is explained. Microgrid control is of the coordinated control and local control categories.

What are centralized and decentralized control functions in microgrids?

It presents the hierarchical control levels distinguished in Microgrids operation and discusses the principles and main functions of centralized and decentralized control, including forecasting and state estimation. Next, centralized control functions are analyzed and illustrated by a practical numerical example.

### Why do microgrids need different control arrangements?

This suggests a need for capabilities that model different control arrangements, such as through ADMS, Aggregators or DERMS, and the visibility of control so that stakeholders may assess the degree to which the capabilities of the microgrid can be used to meet stated performance objectives as dictated by the controller arrangement.
