The Eltek scalable DC power system offers an array of configurable components that come together to produce large-scale, high-power solutions--up to half a million watts! ... Battery Distribution. Breaker positions up to. 0. DC Load ...

In some cases shore power will only charge the house batteries. To tell if your chassis batteries are being charged just check the voltage across the battery, should be +13 volt if charging. If not you could simply turn the chassis battery off to try and preserve the battery or add a trickle charger to it.

Breaker positions up to. 0. DC Load Distribution. Breaker positions up to. 48. Breaker rating up to. 1200 A. LVLD. No. GJ Breaker/TPL Fuse Panel

My Battery Disconnect Relay went bad a few months back. The inside switch by the entry door was okay and worked fine. The Monaco Tech person I had called on the phone said to simply remove the HD Red battery lead from the one side and mount it to the other lug where the second HD Red cable is attached.

Just a wild guess check the batteries solenoids. I believe one of them is activated when the chassis battery is fully charged, and then the coach batteries get charged. Monaco service center should know which relay could be bad, and it is I believe on the circuit board. The techs should be able to direct your shop to the right part.
