What is the difference between monocrystalline and polycrystalline solar panels?

Pros and cons of Monocrystalline solar panels The main difference between Monocrystalline and Polycrystalline solar panels is that Monocrystalline solar panels are made of a single silicon crystal cell, and Polycrystalline panels are made by melting multiple fragments of silicon together to form the wafer for the panel.

How do monocrystalline solar panels work?

The working of monocrystalline panels is quite simple and it starts as the sunlight hits the surface of the panel, the photons within the light interact with the silicon atoms in the solar cell which allow electrons to liberate from their atomic bonds.

How long do monocrystalline solar panels last?

Monocrystalline solar panels have a useful life that can extend to well over 30 years. They often come with a 25-year warranty, and the panels' longevity can offset the slightly higher upfront cost with decades of free electricity generation. Be cautious of seemingly cheap solar panels.

Do monocrystalline panels need maintenance?
