If I plug a battery system to such a grid inverter that it will work but it will work at 100% power, and output at max to the grid? Yes. In the "simple" setup that will cost money for the mppt charge controller plus battery, and "when" the battery starts discharging into the grid-tied inverter it does s at full power and in the end you have used even less "direct PV use";.

The LIVOLTEK GT1-3.6/4.0/4.6/5.0/6.0K-D1 inverter is specially designed for private residential PV systems and its compact design ensures minimal space requirements. Small in size and light in weight, it can be easily installed by one ...

the good method would be to mimic solar panels using a DC/DC converter. So if your battery is 24V, you can probably increase to 36 or 48V. Additionally the current inrush would be limited by the converter. another way would be to add an all-in-one MPPT after the grid tie, so the battery will go thru the inverter of the MPPT.

Grid-Tied Solar Inverter 1. Definition. Grid-tied inverters are designed for systems connected to the utility grid. They convert solar-generated DC into AC compatible with the grid's frequency and voltage. One significant advantage of grid-tied systems is net metering, where excess energy produced is sent to the grid, often in exchange for ...
