How do you test a solar panel with a multimeter?

A solar panel is a group of modules mounted to a section of rack, as seen here. A multimeter is a tool that measures the voltage, current, and resistance of an electrical circuit. Fluke recommends using the Fluke 117 Electrician's Multimeter to test solar modules. Here's how a technician tests solar modules with a multimeter:

How do you measure a solar panel voltage?

Measure the panel's voltage output by connecting the multimeter to the solar panel. Connect the multimeter's positive and negative leads with the solar panel's positive and negative leads. The multimeter should show the panel's voltage output. The final step is to calculate the output. To do this, multiply the amperage by the voltage.

How do you measure voltage with a multimeter?

The voltage you measure with your multimeter should be close to the open circuit voltage listed on the back of the panel. It doesn't have to be identical, though. If they're similar, so far your panel seems to be in good condition. You can move on to the next step -- measuring short circuit current.

How do you use a multimeter?

Set multimeter to DC volts for accurate voltage measurement. Connect probes securely for reliable data on panel's performance. Compare measured voltage output with manufacturer's values. Adjust multimeter to measure DC amps for current output. Optimize panel angle to maximize current output efficiency.

How do you calculate the power output of a photovoltaic panel?

To do this, multiply the amperage by the voltage. For example, if the amperage is five amps and the voltage is 20 volts, the power output would be 100 watts. Knowing the power output of a photovoltaic panel is an important requirement of a solar system.

How do you test a MC4 inverter with a multimeter?

Place the red (positive) probe of the multimeter into the positive MC4 connector. Place the black (negative) probe of the multimeter into the negative MC4 connector. Measure the voltage at the output terminals of the inverter with a multimeter and record it. (If your voltage reading is negative, reverse the probes and measure again.)
