What type of power system can Eaton switchgear be used in?

It can be used in 27.5kV and 2x27.5kV, 50Hz railway power systems. By utilizing Eaton's most advanced, high-performance vacuum interrupter, and equipped with Eaton's new generation spring mechanism, this switchgear can provide high reliability and excellent breaking performance for customers.

Eaton leads the industry in the application of single-phase voltage regulators into substations regulating loads up to 60 MVA. With features such as fan cooling and insulating fluid filtration, substation voltage regulators provide a viable option superior to the use of On-Load Tap-Changers (OLTC) with the added flexibility of regulation separate from the power transformer.

Vacuum interrupters are switching devices that use separable contacts in an enclosed vacuum-tight chamber. The operation of the contacts initiates the ionization process; however, the sealed vacuum chamber safely quenches the arc.
