Is kilovault a good battery?

KiloVault might be a relatively new name in lithium iron phosphate (LiFePO<sub>4</sub>) batteries, but I'd expect to hear a lot more about them based on what I've seen so far. The HLX+ series of batteries are well-made, drop-in-style batteries with lots of capabilities at an affordable price point.

What is a kilovault HLX battery?

The KiloVault's HLX series were designed and tested to meet the demands of high-capacity inverters and chargers, in either an off-grid or grid-tied storage setting. The HLX Series' lithium battery technology stores and delivers energy more efficiently than traditional deep cycle batteries, requiring no maintenance on your part.

Does kilovault have a CHLX battery?

Much like the HLX, KiloVault currently sells an 1800 Wh and a 3600 Wh model of the CHLX battery. Obviously, the defining feature of the CHLX is its ability to charge when outside temperatures get below freezing. A look at the spec sheet indicates that the CHLX can only charge from 32 - 113°F (0 - 45°C), so this may cause a bit of confusion.

Does kilovault have Wi-Fi?

KiloVault delivers the best technology available today with built-in Wi-Fi to manage battery performance, inverter communication, and safety features integrated into the system. The HAB 7.5 comes with a 10-year limited warranty, which is among the longest protection periods for lithium batteries of this size.

Is kilovault a good investment?

KiloVault continues to push the envelope with its excellent lithium solar batteries. With product lines for infinite off-grid applications, KiloVault is a wise investment for any solar power storage system. Through our rigorous testing and research, we at Shop Solar Kits have become a leading voice in the DIY solar generation market.

Are kilovault batteries hot or cold?

Compared to lead-acid batteries or even cheaper lithium-ion models, KiloVault batteries are well protected against both hot and cold temperatures. In all of KiloVault's batteries, the technology allows for a discharge rate of less than or equal to 2% of the stored capacity.
