What makes Northvolt a sustainable Battery Company?

Powered by the most sustainable, low-carbon energy grid in Germany thanks to local wind power, our goal is to supply automotive customers with 60 gigawatt hours of sustainable, high-quality battery cells every year. Northvolt was founded in 2016 to enable the transition to a decarbonized future by establishing a sustainable battery industry.

Will Northvolt Drei produce a lithium-ion battery?

With an annual potential production capacity of 60 GWh, Northvolt Drei will deliver a supply of sustainably produced lithium-ion batteries to the European market, sufficient for some one million electric vehicles.

Is Germany funding Northvolt's battery cell factory?

The EU Commission has approved the German government's funding for Northvolt's battery cell factory in the North of the country under state aid law. Northvolt received the funding decision for the factory at the beginning of December 2023 - it was subject to approval, which the EU has now granted.

Will Northvolt build a factory in Canada?

Northvolt cited high energy prices and is also pushing ahead with a factory project in Canada in order to benefit from the subsidies there and the demand due to the Inflation Reduction Act in the USA. However, both the company and politicians emphasised that the goal remains to build the factory in northern Germany.

Could Northvolt be a model for Germany's energy transition?

The project is being seen as part of the model for the German government's energy and transport transition. Northvolt has emphasized that the coastal location in northern Germany near the border to Denmark means the factory is ideally placed to use locally produced offshore wind power.

Wolfsburg, Berlin, Germany - The Volkswagen Group and further European partners are joining forces to form the European Battery Union (EBU) with a view to forging ahead with battery research throughout Europe. The new consortium is to be led by the Volkswagen Group and the Swedish battery producer Northvolt.

Northvolt spoke with Alex Eller, senior analyst with Navigant Research, for his perspective on the landscape of energy storage now and out to 2030. "It's certainly a good time for energy storage; we're seeing large

volumes of projects to be built in the coming three years, and the global forecast more than doubled from 2019 to 2020.

Sweden's Northvolt hopes to make batteries for a million electric vehicles each year. Chancellor Olaf Scholz attended the groundbreaking and welcomed the project as a model for Germany and...

Presently, Northvolt Ett is composed of one upstream cathode production block and two downstream cell manufacturing blocks. Covering 500,000 sqm, this setup provides 16 GWh of annual cell production capacity. With this initial production capacity, Northvolt will bring new prismatic cell products to commercial maturity.
