

Are Baltic Power Systems a synchronous grid?

The power systems of Estonia, Latvia and Lithuania (Baltic Integrated Power System) are currently operated - as a synchronous grid- in parallel with the Integrated/Unified Power System (IPS/UPS) of Russia and Belarus. The Baltic power systems still lack adequate electricity connections, both between themselves and to other parts of the EU.

How much wind power does Estonia have?

Total installed wind power was 149 MW at end of 2010 and grew to 303 MW in 2014 and 329 MW in 2016. Record production of wind parks is 279 MW in 2014. Estonia has target of 14% (1.5 TWh) and total renewable electricity 1.9 TWh (17.6%). According to the national Energy Action Plan (2020) planned shares are onshore 9% and offshore 5%.

What is the largest power plant in Estonia?

The largest power complex in the country, Narva Power Plants, consists of the world's two largest oil shale-fired thermal power plants. The complex used to generate about 95% of total power production in Estonia in 2007. Falling to 86% in 2016 and 73% in 2018.

When did Estonia join the Nord Pool Spot Market?

The direct electrical interconnection with Finland was established in 2006 and was further strengthened by the Estlink 2 interconnector in 2014. Estonia joined the Nord Pool Spot market by 2012, securing its own price area within this regional electricity market.

Does Latvia have a good power system?

The Latvian power system enjoys considerable market advantages due to the high ratio of renewable energy - mainly hydro - in its electricity generation mix. In the reference scenario Latvia is a net exporter. However, the network seems not as adequate as that of Lithuania.
